### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/IB2004/050314

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)

Yes: Claims

1-3,6-11

No: Claims

5

Inventive step (IS)

Yes: Claims .

No: Claims

1-3,5-11

Industrial applicability (IA)

Yes: Claims

1-3,5-11

No: Claims

2. Citations and explanations (Rule 70.7):

see separate sheet

# Re Item I Basis of the report

The applicant has not provided a basis for the amendments of claims 1, 5, and 6 under Article 19(1) PCT.

No basis could be found (Article 19(2) PCT) for the amendments of claim 1 in line 16 ("... and the **curved** portion being provided in the other end of the second grasping plate ...") and in line 22 ("... between the first **grasping** portion of the first grasping plate ..."). It appears, however, that these amendments are acceptable if "**curved** portion" is replaced by "**fixing** portion" (see [88]), and "first **grasping** portion" is replaced by "first **retaining** portion" (see [75]). For the comments under Item V it is presumed that these replacements have been made.

#### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents:

D1: US-A-5 496 341 (SAUER JUDE S ET AL) 5 March 1996 (1996-03-05)

D2: US-A-4 286 598 (KAPITANOV NIKOLAI N ET AL) 1 September 1981 (1981-09-01)

2.1 The document **D2** discloses a surgical holder with:

grasping member: jaws 4, 5

manipulation member: levers 1, 2

connection portion with fixing tool: e.g. automatic lock 7

first grasping plate: jaw 4 second grasping plate: jaw 5

first grasping portion: e.g. right end of jaws 4, 5 in Fig. 11 second grasping portion: e.g. left end of jaws 4, 5 in Fig. 11

Jaw 4 together with removable part 8 has a U-shape. Therefore, one of its ends, e.g. its right end, is a retaining portion having an opening which is opened toward an outer side of the first grasping plate, and its other end, e.g. its left end, is a supporting portion having a recessed portion.

Analogously, jaw 5 includes a covering portion and a fixing portion.

- 2.2 Consequently, the present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of **claim 5** is **not new** in the sense of Article 33(2) PCT.
- 3 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1-3 and 6-11 does not involve an inventive step in the sense of Article 33(3) PCT:
- 3.1 The subject-matter of these claims differs from **D2** (see above) in that the second grasping plate has a "**non-covering portion** which does not cover the first grasping plate", and in that the fixing portion has a "**curved portion**". Both features do not bring about any relevant technical effect connected therewith.
- 3.2 Dependent claims 2 and 3: known measures for the skilled person
- 4 It should be noted that the subject-matter of claim 5 does also not involve an inventive step in the sense of Article 33(3) PCT over document D1:

The document D1 (see Figs. 1-3) discloses a surgical holder with:

grasping member: head 22, head section 47 manipulation member: finger grips 44, 45

connection portion: pivot pin 60 first grasping plate: head 22

second grasping plate: head section 47

first grasping portion: distal ends of head 22 and head section 47

#### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/IB2004/050314

opening: distal ends of grooves 28 second grasping portion: proximal ends of head 22 and head section 47

The subject-matter of claim 5 differs therefrom only be the provision of a fixing tool, which is so vaguely defined that there is no unitary technical effect connected therewith. Therefore, it is considered a design option.

21

#### **Claims**

(Amended) A surgical holder comprising a grasping member for grasping a tissue, a manipulation member for manipulating the grasping member, and a connection portion with one end connected to the manipulation member, wherein: the grasping member includes a first grasping plate, and a second grasping plate provided so as to oppose the first grasping plate in a movable manner so that they are able to become closer to each other or more distanced from each other; the first grasping plate includes a retaining portion having an opening which is opened toward an outer side of the first grasping plate and a supporting portion having a recessed portion, the opening being provided in one end of the first grasping plate and the recessed portion being provided in the other end of the first grasping plate,

the second grasping plate includes a covering portion formed so as to cover an entire surface or a part of the opening of the first grasping plate, a non-covering portion which does not cover the first grasping plate, and a fixing portion having a curved portion, the covering portion being provided in one end of the sec ond grasping plate and the curved portion being provided in the other end of the second grasping plate,

the curved portion opposing the recessed portion to form the tissue grasping space when the first grasping plate and the second grasping plate are positioned so as to oppose on another,

a first grasping portion which can grasp a part of a tissue between the first grasping portion of the first grasping plate and the covering portion of the sec ond grasping plate are provided in one end portion of the grasping member, and the opening exposing another part of the tissue when a part of a tissue is grasped by the first grasping portion; and

a second grasping portion which can form a tissue grasping space between the recessed portion of the first grasping plate and the curved portion of the second grasping plate is provided in another end portion of the grasping member.

- [2] A surgical holder according to claim 1, wherein a tissue protection material is attached to an opposing surface of the first grasping plate and/or the second grasping plate.
- [3] A surgical holder according to claim 2, wherein the tissue protection material is permeated with medicines.

### AMENDED SHEET (ARTICLE 18)

Lo Sepon

[4] (Canceled)

(Amended) A surgical holder comprising a grasping member for grasping a [5] tissue, a manipulation member for manipulating the grasping member, and a connection portion with one end connected to the manipulation member and the other end provided with a fixing tool, wherein:

AMENDED SHEET (ANTICLE 19)

the grasping member includes a first grasping plate, and a second grasping plate provided so as to oppose the first grasping plate in a movable manner so that they are able to become closer to each other or more distanced from each other;

the grasping member is formed into a rectangular shape with the manipulation member elongated from a side thereof;

a first grasping portion which can grasp a part of a tissue between the first grasping plate and the second grasping plate, and an opening which is provided in the vicinity of the first grasping portion and exposes another part of the tissue are provided in one end portion of the grasping member, the opening being opened at an outer side of the first grasping portion;

a second grasping portion which can form a tissue grasping space between the first grasping plate and the second grasping plate is provided in another end portion of the grasping member, the tissue grasping space and the opening be ing positioned at respective ends on one axis of the grasping member.

[6]

[7]

(Amended) A surgical holder comprising a grasping member for grasping a tissue, a manipulation member for manipulating the grasping member, and a connection portion connected to the manipulation member, wherein: the grasping member includes a first grasping plate and a second grasping plate provided so as to oppose the first grasping plate in a movable manner so that they are able to become closer to each other or more distanced from each other; the first grasping plate includes a retaining portion having an opening of a U-shape or substantially a U-shape, and a supporting portion having a recessed portion, the opening being provided in one end of the first grasping plate and the recessed portion being provided in the other end of the first grasping plate; and

the second grasping plate includes a covering portion formed to cover an entire surface or a part of the opening of the first grasping plate, a non-covering por tion which does not cover the first grasping plate, and a fixing portion having a curved portion, the curved portion opposing the recessed portion to form the tissue grasping space when the first grasping plate and the second grasping plate are positioned so as to oppose one another.

A surgical holder according to claim 6, wherein the tissue to be grasped is a tubular tissue with a surrounding tissue, and the surrounding tissue is grasped by a part which defines the shape of the opening of the first grasping plate and the covering portion of the second grasping plate.

HEND SHET (ATICLE 19

- [8] A surgical holder according to claim 6, wherein the tissue to be grasped is a tubular tissue, and the tubular tissue is grasped by a tissue grasping space formed by the recessed portion of the first grasping plate and the curved portion of the second grasping plate.
- [9] A surgical holder according to claim 6, wherein the tissue to be grasped is a tubular tissue, and the tubular tissue is grasped with one point of the tubular tissue being grasped by the retaining portion of the first grasping plate and the covering portion of the second grasping plate, and another point being grasped by a tissue grasping space formed by the recessed portion of the first grasping plate and the curved portion of the second grasping plate.
- [10] A surgical holder according to claim 6, wherein the tissue to be grasped is a

1B034/80314

tubular tissue, and an end portion of the retaining portion which defines the opening of the first grasping plate is inserted into a tube of the tubular tissue to grasp the tubular tissue.

[11]

A surgical holder according to claim 6, wherein the tissue to be grasped is a tubular tissue (A), and, (i) with one point of the tubular tissue (A) grasped by the retaining portion of the first grasping plate and the covering portion of the second grasping plate and another point of the tubular tissue (A) grasped by the rissue grasping space formed by the recessed portion of the first grasping plate and the curved portion of the second grasping plate, anastomosis manipulation between a cut portion of thetubular tissue (A) and a cut portion of a tubular tissue (B) positioned on the supporting portionis performed, and then, (ii) with the tubular tissue (A) grasped by the tissue grasping space formed by the recessed portion of the first grasping plate and the curved portion of the second grasping plate, anastomosis manipulation between a cut portion of the tubular tissue (A) and a cut portion of the tubular tissue (C) positioned on the supporting portionis performed.
